

CHAPTER 3: CSS (CONTINUED)

Note

- All example files used in this chapter are available at

<https://swe.umbc.edu/~zzaidi1/is448/chap3-examples/>

A step back into HTML

- Two HTML tags that are especially useful when applying styles
 - ▣ `<div>` tag
 - ▣ `` tag

Logical Divisions: div

- May want to apply special style properties to an entire section of the document

```
<div class="standout">
```

```
  <h2>Spatula City! Spatula City!</h2>
```

```
  <p>See our spectacular spatula specials!</p>
```

```
  <p class="special">We'll beat any advertised price!</p>
```

```
</div>
```

HTML

- **<div> tag:**

Browser view:

See mypage_divtags.html

- ▣ used to indicate a logical section or area of page
- ▣ has no appearance by default, but you can apply styles to it
- ▣ Block tag

Logical divisions: div

Inline styling:

- Want to apply a style to less than a whole paragraph/line of text
- Has no default layout
- Can apply style to text within tags

```
.spanred{  
    font-size: 24pt;  
    font-family: Arial; color: red  
}
```

CSS

```
<p >  
    It sure is fun to be in  
    <span class="spanred">total</span>  
    control of text  
</p>
```

HTML

Browser view: See mypage_span.html

Now, back to CSS concepts!

CSS Box Model

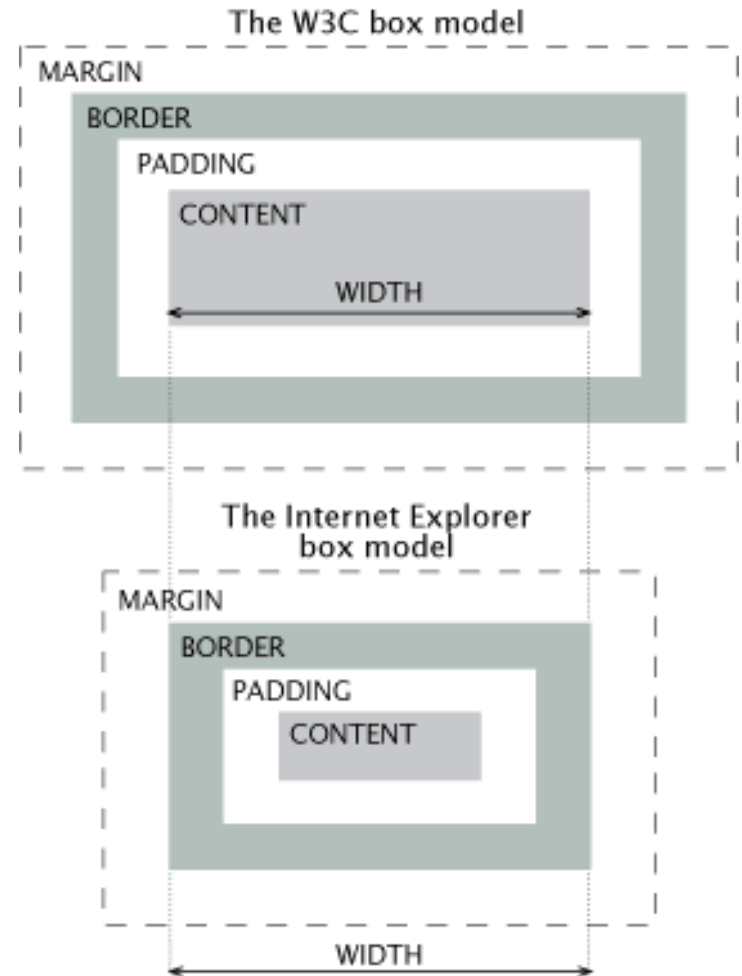

□ Motivation

- want to be able to style individual elements, groups of elements, sections of text of the page
- want to create complex page layouts

CSS Box Model

- For layout purposes, every element is composed of
 - ▣ the actual element's **content**
 - ▣ a **border** around the element
 - ▣ **padding** between the content and the border (*inside*)
 - ▣ a **margin** between the border and other content (*outside*)
- IE6 doesn't implement the CSS box model right
 - ▣ see links on BB course page

CSS Box Model

- Width of an element = content width + L/R padding + L/R border + L/R margin
 - Height of an element = content height + T/B padding + T/B border + T/B margin
-

Border Properties

□ border-style

- ▣ values: solid, dotted, dashed, double, none
- ▣ Can set individual borders
 - border-top-style, border-left-style, border-bottom-style, border-right-style

□ border-width

- ▣ sets thickness
- ▣ can set individual borders as above
 - border-top-width, border-left-width, border-bottom-width, border-right-width

Border Properties

- border-color

- ▣ can set individual borders

- border-top-color, border-left-color, border-bottom-color, border-right-color

- See mypage_borders.html

Lab

- Do exercise 1 of lab handout, [css-lab.pdf](#), posted along with course slides on blackboard for this lecture

Padding

- **padding**: padding on all 4 sides
- **padding-bottom**: padding on bottom side only
- **padding-left**: padding on left side only
- **padding-right**: padding on right side only
- **padding-top**: padding on top side only

Padding

CSS

```
p { padding: 20px; border: 3px solid black; }  
h2 { padding: 0px; background-color: yellow; }
```

Browser view:

All you can eat buffet!

padding: spacing within element

↔ This is the first paragraph ↔

This is the second paragraph

Also see [mypage_padding.html](#)

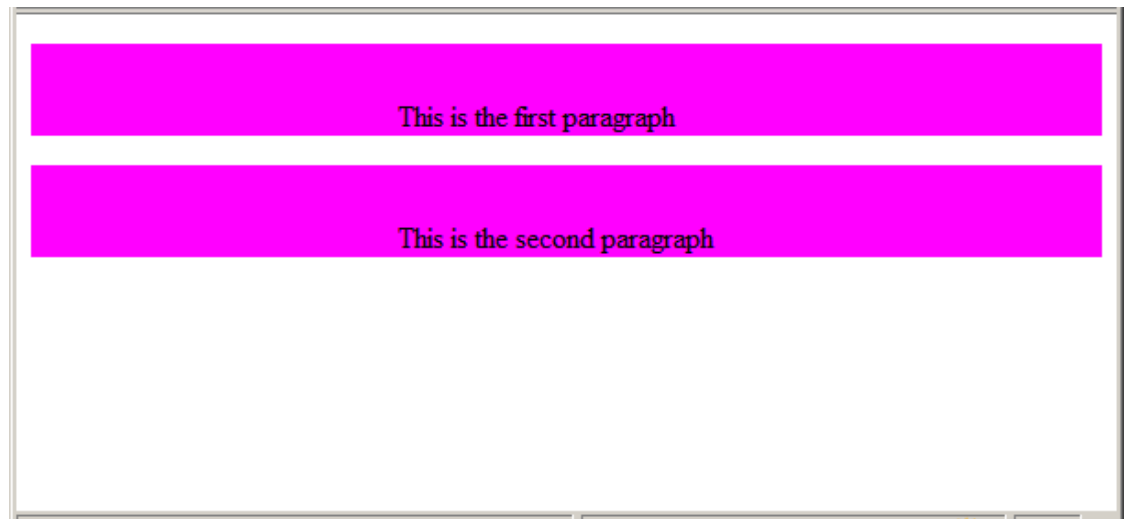

Padding

- Can set padding for each side separately
- Note how padding takes on the background color

CSS

```
p {  
  padding-left: 200px;  
  padding-top: 30px;  
  background-color: fuchsia;  
}
```

Browser view:

Browser view:
See [mypage_indpadding.html](#)

Margins

- **margin**: margin on all 4 sides
- **margin-bottom**: margin on bottom side only
- **margin-left**: margin on left side only
- **margin-right**: margin on right side only
- **margin-top**: margin on top side only

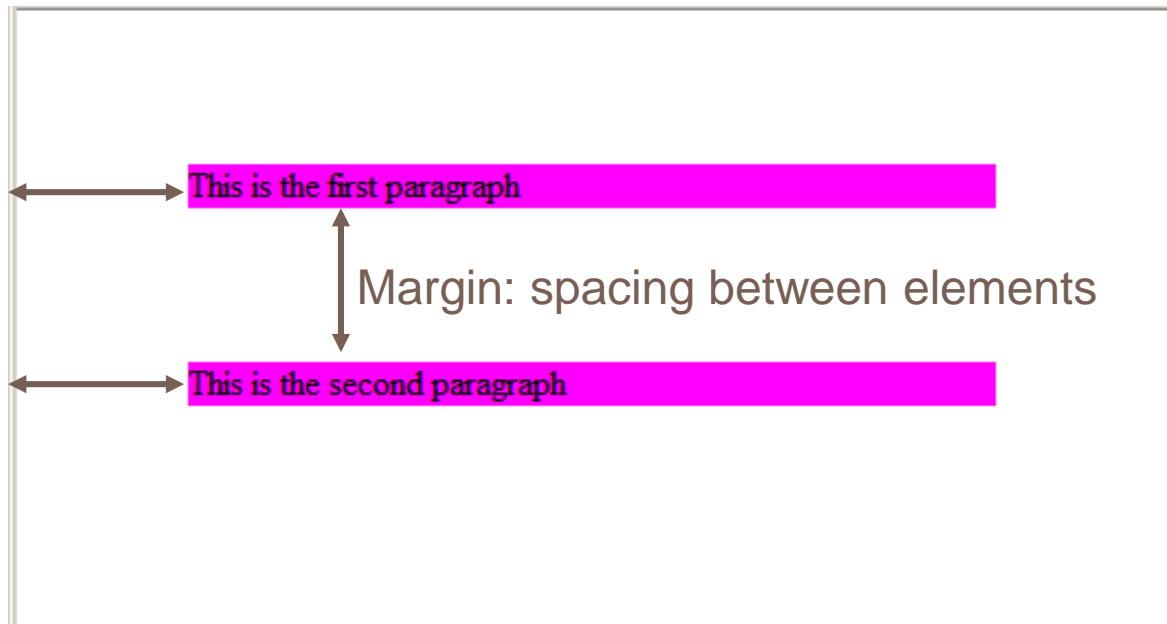

Margins

CSS

```
p {  
    margin: 70px;  
    background-color: fuchsia;  
}
```

- Also see mypage_margin.html

Note how margins are transparent (they don't contain the element's background color, etc.)

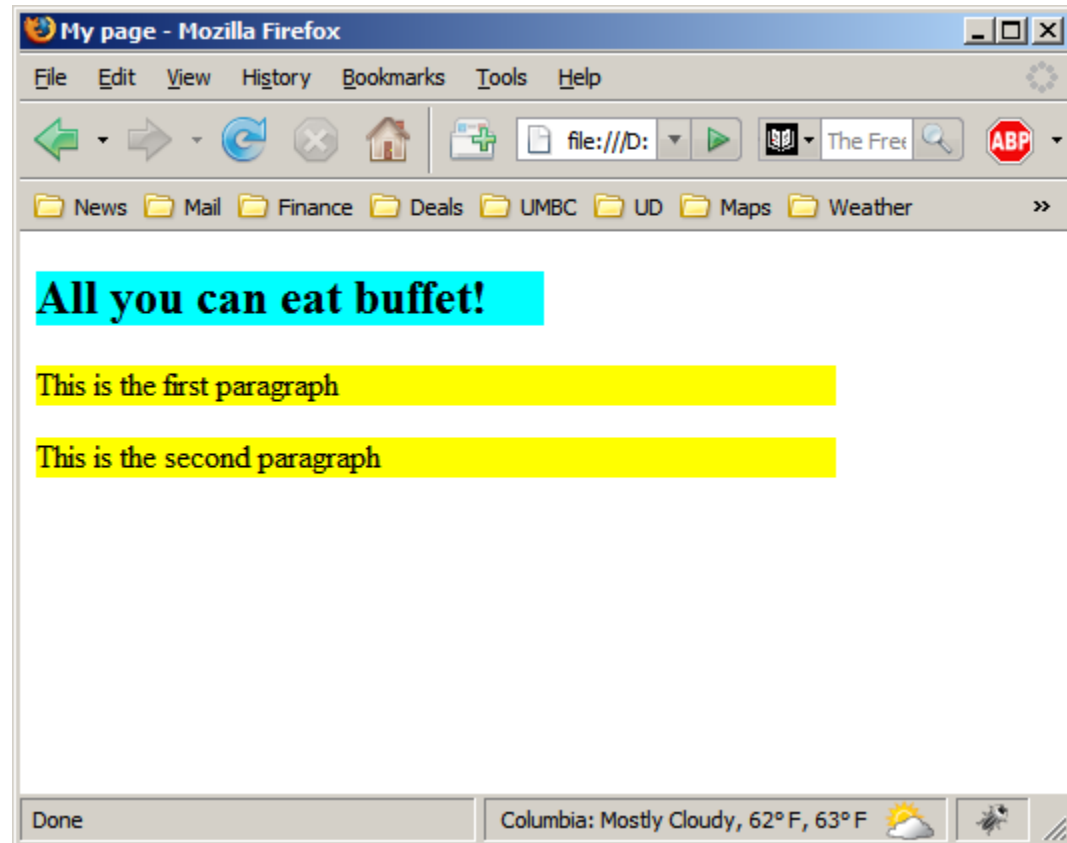

CSS Properties for Dimensions

- **width, height**: how wide or tall to make this element
- **max-width, max-height, min-width, min-height**: the maximum or minimum size of this element in the given dimension
- all of these apply only to block elements; ignored for inline elements
- **width** property sets the width of the area inside the padding, border and margin

Dimensions

```
p { width: 400px; background-color: yellow; }  
h2 { width: 50%; background-color: aqua; }
```

See mypage_dimensions.html

CSS: Background Images

- Use the **background-image** property to place an image in the background of an element

```
body{  
    background-image: url(halloween_image.jpg)  
}
```

```
<body>  
<p> Halloween is not too far away </p>  
</body>
```

See [mypage_bgimage.html](#)

Other background properties

- background-repeat

- repeat: default

- no-repeat: one copy of image displayed

- repeat-x: image to be repeated horizontally

- repeat-y: image to be repeated vertically

- background-position

- values: top, center, bottom, left and right, or a length value in px or pt

CSS Properties: Background

- `background-color` : color to fill background
- `background-image` : image to place in background
- `background-position` : placement of bg image within element
- `background-repeat` : whether/how bg image should be repeated
- `background-attachment` : whether bg image scrolls with page
- `background` : shorthand to set all background properties

CSS properties: text-align

- ❑ Specifies the horizontal alignment of text in an element
- ❑ Common values: center, left, right, justify
- ❑ Example usage

```
h1 {  
  text-align: center;  
}
```

```
.format{  
  text-align: right;  
}
```

Lab

- Do exercise 2 of lab handout, [css-lab.pdf](#), posted along with course slides on blackboard for this lecture

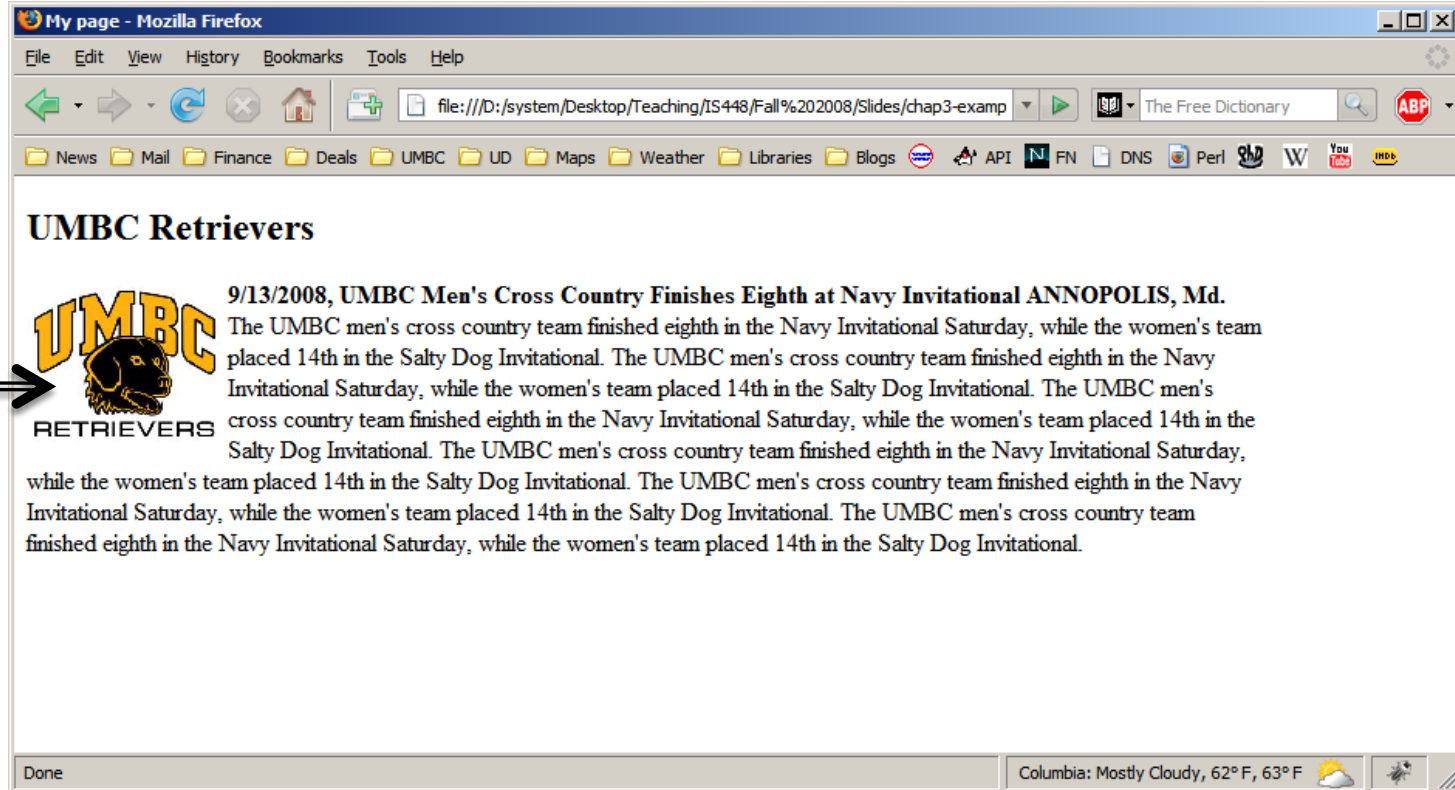

Floating elements: float Property

- Floating elements are removed from normal document flow
 - ▣ Underlying text wraps around floating element as necessary
- **float** can have values **left**, **right**, or **none** (default)
- Usually has a **width** property
 - ▣ Otherwise, default is 100% width
 - ▣ Other text can't wrap around
- Reference
 - <http://www.w3.org/TR/CSS2/visuren.html#floats>
- See `example_float.html`

float Property

```
img.headericon { float: left; width: 130px; }
```

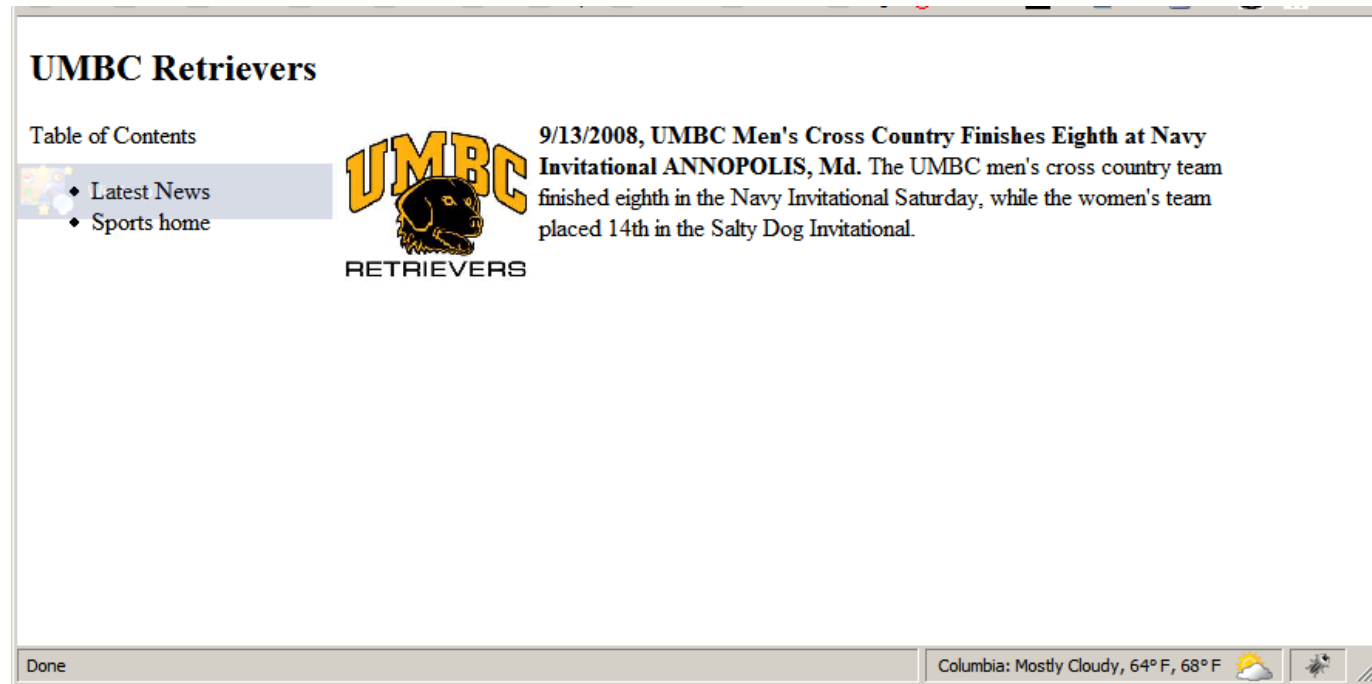

Image floats to
left while text
wraps
around image

See mypage_float_left.html

Adding two columns with float

```
.left { float: left; width:200px; }  
.right { float: right; width:600px; }
```

See mypage_float1.html

clear Property

- ❑ Disallows any floating elements from overlapping this element
- ❑ **clear** can be **left**, **right**, **both**, or **none** (default)

clear Property

```
p.clearonright  
{  
  clear:right;  
}
```

UMBC Retrievers

9/13/2008, UMBC Men's Cross Country Finishes Eighth at Navy Invitational ANNAPOLIS, Md. The UMBC men's cross country team finished eighth in the Navy Invitational Saturday, while the women's team placed 14th in the Salty Dog Invitational.

The UMBC Retrievers (10-13, 4-7 America East) face a tough road squad, the UNH Wildcats (9-13, 4-6) on Tuesday at the RAC Arena. The game can be seen in the region on MASN and is also available on ESPN. Full Court with Eric Frede and Frank Sullivan on the call. UMBC's broadcast can be heard on Fox 1370 Sports. (www.fox1370.com) (Gary Stein, Paul Mittermeier). You can also see all the live action and hear the call on www.umbretrievers.tv.

See [mypage_clear2.html](#)

Lab

- Do exercise 3 and 4 of lab handout, [css-lab.pdf](#), posted along with course slides on blackboard for this lecture
